Reasons for Allowance

I. The following is an examiner's statement of reasons for allowance:

- the rejection of Claims 19 and 20, first and second paragraphs has been withdrawn due to applicants' convincing argument.
- the closest prior art to the current invention is McInnis (EP 0827995).

McInnis teaches a method for joining or sealing two substrates using an adhesive composition in which a polyisocyanate prepolymer is obtained from the reaction between a polyisocyanate with a functionality of at least 2 and a polyol a functionality of at least 2; furthermore, the reaction product contains at least 90 wt% perfect prepolymer and less than 2 wt % unreacted isocyanate monomer and the prepolymer with a free NCO functionality ranging from 0.2 to 8 wt % .

However, the instant invention differs from the reference in that there is no suggestion or teaching or motivation for the method of producing specific prepolymer obtained from the reaction product of an MDI polyisocyanate with the defined polyol composition comprising a propylene oxide based polyether polyol (PPG), thereby resulting in at least 80 Wt% perfect prepolymers and and less than 2 wt% free MDI monomer. In addition, unless all limitations of the claims are met, there is no prior art rejection. See In re Zurko 59 USPQ 2d 1690 (Fed Cir. 1991) and In re Lee, 61 USPQ 1430 (Fed Cir. 1991).

Therefore, applicants' claimed subject matter would not have been obvious to the person with an ordinary skill in the art.
